SUMMARY Hi! I'm Serg and I build products that people love to use. I started out my professional career as a freelance graphic and web designer, which taught me how users view and think about UIs, but I eventually became more interested in development side of things. Since then I've been honing my programming skills while leveraging my design experience to create products that people want to use time and time again.

EXPERIENCE **Freelance, Web Designer and Developer** January 2012 — March 2014

Worked with various clients designing and developing informational websites, web applications, and UIs for mobile apps.

- Implemented several custom themes and plugins for WordPress platform
- Worked with a team of designers and developers to create and refine UI for iOS app

Groove, Full Stack Developer March 2014 — September 2015
<https://www.groovehq.com>

Was responsible for developing marketing website and blog, built with custom CMS on top of Ruby on Rails.

- Implemented 2 redesigns while closely working with design and marketing teams, and achieved substantial improvements in several key marketing metrics
- Worked with content team to create a system that streamlined the process of writing, publishing, and organizing of blog articles

Groove, Senior Frontend Developer September 2015 — November 2019
<https://www.groovehq.com>

Worked with a team of developers and designers on several Groove applications: shared inbox, support widget, knowledge base.

- Was part of the team responsible for a major rewrite of Rails server-rendered shared inbox application into a system with React-based Progressive Web Application as frontend plus Rails API and a GraphQL layer, that lead to increase in developer velocity and application responsiveness, and created a platform for future apps
 - Advocated for and took initiative in implementing Storybook for a company design system which unified designs of applications and allowed developers to iterate more quickly
 - Was part of (and an unofficial lead of) the Frontend Working Group, responsible for major frontend development decisions as well as promotion and enforcement of best-practices
-
